EXAMINER'S ACTION

Art Unit: 3308

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1-4 are rejected under 35 U.S.C. § 102(e) as being anticipated by Noiles, et al.

Noiles discloses a hip joint socket including an outer metal shell and an inner antifriction liner removably fixed to the shell by means of a taper lock having a lock angle within the range as claimed. See column 3, lines 5-17.

Claim 2, examiner is interpreting "about 18 degrees" as falling within the range of about 6 to 17 degrees.

Claims 3 and 4, see diametrical openings 24.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3308

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

4. Claim 5 is rejected under 35 U.S.C. § 103 as being unpatentable over Noiles, et al as applied to claim 1 above, and further in view of Cremascoli.

The use of ceramic as the antifriction component in a hip joint prosthesis is taught by Cremascoli. To use the ceramic in place of a metal component for better wear characteristics would have been obvious from Cremascoli.
